

# Pyramid IoT Architecture

## Cloud calculation

- Responsible for the data collection of the national stores
- Analyze the main operating indicators of the store
- Integrated sensor data and sales data analysis
- Data-based store data to plan featured stores
- Innovative planning and adjustment of commodities to reduce commodity retention
- Analyze and plan manpower allocation to improve efficiency and increase revenue

## Fog calculation

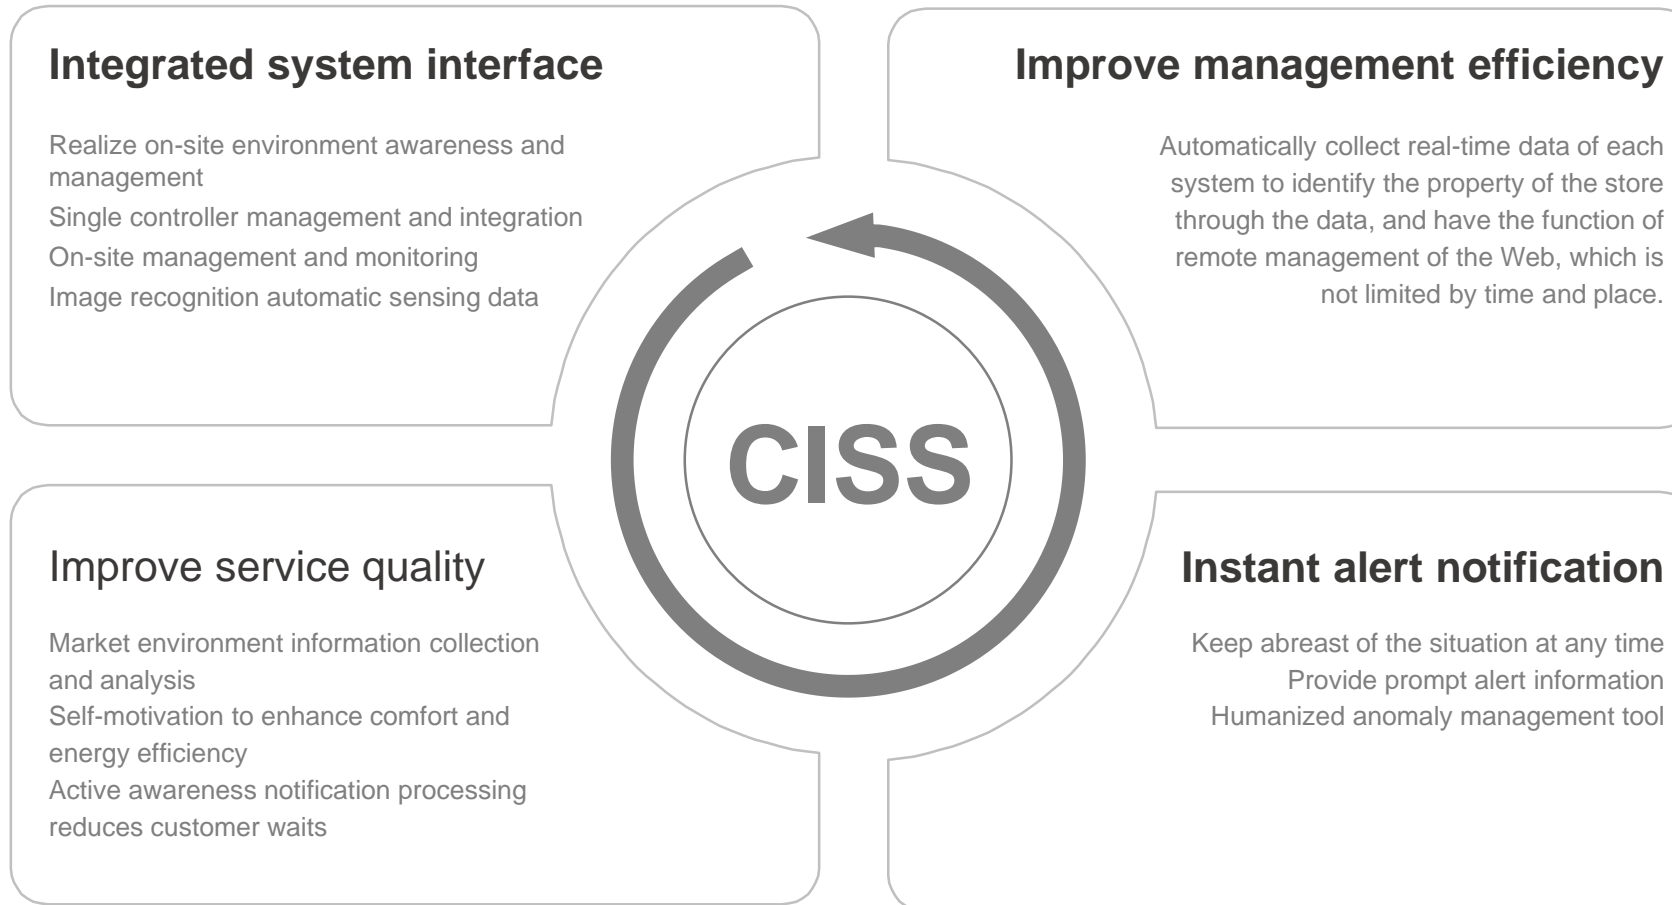

- Collecting market status information in the area
- Simple summary of performance and information
- Dashboard instant control operation

## Edge calculation

- The sensor in the store collects data
- Integrated store equipment management
- Image recognition collects visitor information
- Energy management and comfort regulation

# Smart Retail Management Solution

Integrate different functional systems through a unified information intelligence platform to form a system with comprehensive functions such as information collection, resource sharing and optimization management.

# The Benefit
